CUKUROVA GENERATOR SYSTEMS

1500 Rpm, 50Hz, 400V

Perkins 4012-46TWG2A diesel engine

Newage/Stamford PI734B alternator

Standard Generator Features

- AMF, Automatic mains failure unit
- ♦ Heavy duty type, 12 cylinder, water cooled engine
- ♦ 50°C tropical type radiator
- Starter motor
- Lead acid battery
- Charging alternator
- > Battery charge redressor
- Heavy duty, brushless type alternator
- ♦ Base frame with anti-vibration units
- Industrial type silencers
- Flexible exhaust compensator
- Block water heater unit
- Control panel with digital-automatic main control module
- Fan, fan drive, charging alternator drive and all rotating parts covered
- Radiator matrix covered by metal mesh against the mechanical damages
- Fabricated and welded steel base frame
- Anti-vibration mountings
- Engine and alternator manufacturer test reports
- ♦ Factory load, performance and function tests

Optional Features

- Automatic load transfer panel
- Automatic syncronization and power sharing systems
- Soundproof canopy
- Container type enclosers
- ♦ Road trailer
- Job-site trailer
- ♦ Protection circuit breaker
- ♦ Air start
- ♦ Remote type radiator
- ♦ Base fuel tank
- ♦ External type fuel tank
- Automatic fuel transfer system
- Residential silencer

APPLICATION DATA

Perkins 4012-46TWG2A Engine

Standard Features

Economic power

Individual four valve per cylinder heads give optimised gas flows, while unit fuel injectors ensure ultra fine fuel atomisation and hence controlled rapid combustion for efficiency and economy

 Commonality of components with other engines in the 4000 Series family allows reduced parts stocking levels

Reliable power

- Developed and tested using latest engineering techniques
- ♦Piston temperatures are controlled by an advanced gallery jet cooling sys.
- All engines are tolerant of a wide range of temperatures without derate
- Service is provided by the extensive Perkins network of over 4.000 distributers and dealers worldwide

Clean, efficient power

- Exceptional power to weight ratio and compact size for easier transportation and installation
- Designed to provide excellent service access for easy of maintenance
- Engines designed to comply with major international standards
- Low gaseous emissions for cleaner operation

Standards

♦ UK MOD, BS5750, ISO9001, BS5514/1-1982, ISO 3046/1, ISO 8528/1

Model	Standby kWm		Prime kWm	
	Gross	Net	Gross	Net

Jacket coolant flow, Liters / sec 948
Cooling min airflow, m³ / min 1680

◆Two twin thermostats

Powder coated radiator comprising: water radiator; fuel oil cooling (optional); all pipes, hoses and clips; fan; pulleys; fan belts and safety guards

Optional Equipments

♦Fuel oil cooler integral to the radiator assembly

Newage/Stamford PI734B Alternator

Standard Features

Winding&Electrical Performance

All generator stators are wound to 2/3 pitch. This eliminates triplen (3rd, 9th, 15th...) harmonics on the voltage waveform and is found to be the optimum design for trouble-free supply of non-linear loads. The 2/3 pitch design avoids excessive neutral currents sometimes seen with higher winding pitches, when in parallel with the mains. A fully connected damper winding reduces oscillations during paralelling. This winding, with the 2/3 pitch and carefully selected pole and tooth designs, ensures very low waveform distortion.

MX341 AVR

The PI range generators, complete with a PMG, are available with one of two AVRs.Each AVR has soft start voltage build up and built in protection against sustained over-excitation, which will de-excite the generator after a minimum of 8 seconds.

Underspeed protection (UFRO) is also provided on both AVRs. The UFRO will reduce the generator output voltage proportional to the speed of the generator below a pre-settable level.

The MX341 AVR is two phase sensed with a voltage regulation of \pm 1 %. Both the MX341 and MX321 need a generator mounted current transformer transformer to provide quadrature droop characteristics for load sharing during parallel operation.

Terminals&Terminal Box

Standard generators feature a main stator with 6 ends brought out to the terminals, which are mounted on the frame at the non-drive end of the generator. A sheet steel terminal box contains the AVR and provides ample space for the customers' wiring and gland arrangements. It has removable panels for easy access.

Shaft&Keys

All generator rotors are dynamically balanced to better than BS6861:Part 1 Grade 2.5 for minimum vibration in operation. Two bearing generators are balanced with a half key.

Insulation / Impregnation

The insulation system is class 'H'

All wound components are impregnated with materials and processes designed specifically to provide the high build required for static windings and the high mechanical strength required for rotating components.

Standards

Newage Stamford industrial generators meet the requirements of **BS EN** 60034 and the relevent section of other international standards such as **BS5000,VDE0530, NEMA MG1-32, IEC34, CSA C22.2-100, AS1359** Other standards and certifications can be considered on request

Quaility Assurance

Generators are manufactured using production procedures having a quality assurance level to BS EN ISO 9001.

Control Panel

Standard Equipments

- ◆Deeapse 7320 digital automatic control module
- ◆Emergency stop button

Deepsea 7320 Control Module

Description

- ♦The model 7320 is an Automatic Mains Failure Control module.
- The modul is used to monitor a mains supply and automaticlly start a standby generator set.
- The module also provides indication of operational status and fault conditions automaticly shutting down the genset and indicating failures by means of an LCD display, and appropriate flashing LED on the front panel.
- ♦Selected timers and alarms can be altered by the user from the front panel.
- Alterations to the system are made using USB and a PC. This interface also provides real time diagnostic facilities

Specifications

- ♦240mm x 181mm dimensions
- ♦70mm x 40mm dimensions, 4 segment grafical LCD monitor
- ♦Developed 16-bit Microprocessor design
- ♦Easy comprehended display (Hid-Til-Lit SMD LED technology)
- ◆LED mimic diagram
- SMS messaging capability with suitable GSM Modem
- PC software is MS Windows based and allows the operator to control the module from a remote location (with USB)
- ◆Easy pushbutton controls
- $\diamond \mbox{System}$ parameters can be adjusted manually from the front panel
- ♦kVA,kW ve Cosφ measurements
- ♦Communication with MODEM / Ethernet
- ♦Modbus RTU
- ♦User selectable RS232 or RS485 communications.
- 4 analog inputs, 8 digital inputs, 6 digital outputs

Information

Power Ratings

Standby power rating is for the supply of emergency power at variable load for the duration of the non-avalaibality of the mains power supply.No overload capacity is available at this rating.A standby rated engine should be sized for an avarage load factor of 80% based on published standby rating for 500 operating hours per year.Standby ratings should never be applied except in true emergency power failure conditions.

Prime power rating is available for unlimited hours per year with a variable load of which the average engine load factor is 80% of the published power rating, incorporation of a 10% overload for 1 hour in every 12 hours of operation which permitted

Continuous power rating is available for continuous full load operation.No overload is permitted.

Acc. to ISO 3046/1, BS 5514, DIN6271
